READY FOR DEPLOYMENT

ASCOD – EVOLUTION AND INNOVATION COMBINED IN ONE MULTI-ROLE PLATFORM

The ASCOD family of tracked vehicles is designed around a common base platform. This concept not only reduces the logistical footprint and overall life cycle cost, but allows for the quick realization of innovative, customized variants for a broad range of mission roles: IFV, APC, reconnaissance / forward observer, 105 / 120 mm direct fire, mortar / artillery, air defense, engineering, bridge layer, repair / recovery, command post, logistics, ambulance, and more. Over 1,000 vehicles have already been contracted by four nations. The scalable weight remains below MLC 50 for every version, adding superior strategic mobility by land, air and sea transport.

Demonstrating its extraordinary versatility, GDELS is presenting the ASCOD in a new enhanced configuration at Eurosatory 2024. This ASCOD IFV provides outstanding ergonomics and the largest interior volume for on-board equipment of its category, excellent mobility, and highest ballistic, mine, and IED protection. In addition, it is equipped with the EuroTrophy active protection system on an unmanned 30 mm turret UT30 from Elbit. Other optional features are the EuroSpike ATGM launcher, composite rubber tracks and MESHnet® V6 Tactical from General Dynamics Mission Systems providing cutting edge CIS capability to the combat vehicle. Thanks to its open vehicle architecture and high adaptability, the ASCOD is excellently prepared for today's and for tomorrow's challenges.

WE ENABLE MILITARY MOBILITY
