PANDUR EVO WITH CROSSBOW – STATE-OF-THE-ART TURRETED INDIRECT FIRE SOLUTION

The highly mobile armored vehicle PANDUR 6x6 EVO, equipped with the 120 mm CROSSBOW turreted mortar from Elbit Systems, provides excellent indirect and direct firepower supporting infantry/mechanized forces, with a total system weight below 20 tons. The system can fire a variety of NATO 120 mm ammunition, including the IRON STING guided mortar munition, providing an effective range of up to 10 kilometers. No index loading is required for the CROSSBOW turret, which offers a 360° capability. A coaxial 12.7 mm machine gun is integrated as secondary weapon.

The soft-recoil CROSSBOW mortar system features short sensor-to-shooter cycles and is able to fire the first round within 30 seconds. It has a maximum rate of ten rounds per minute with a sustained rate of fire of six rounds per minute and MRSI (Multiple-Round Simultaneous Impact) capability. The turret is unmanned, with the breech-loading process assisted by a semi-automatic loader.

The PANDUR 6x6 EVO is the latest version of the proven multi-mission PANDUR 6x6/8x8 vehicle family. It features exceptional mobility, compact dimensions (air-transportable in C-130), high operational availability, and unmatched survivability.
