DEPLOYMENT**

EAGLE TASYS – THE AGILE ALL-ROUNDER FOR RECCE AND FORWARD OBSERVER MISSIONS

The EAGLE TASYS (Taktisches Aufklärungssystem or Tactical Reconnaissance System) for the Swiss Armed Forces is among the first 6x6 variants of the mission proven EAGLE family to enter into service. Still a very compact vehicle, but with larger transport volume and higher payload than the 4x4 version, it is perfectly suited for this role. Due to the unique De Dion axle/suspension system, the EAGLE TASYS features the same high level of survivability and unmatched mobility as all members of the EAGLE family.

For reconnaissance and forward observer missions, the EAGLE TASYS is equipped with an integrated telescopic mast with multi-sensor head, along with the necessary IT and communications systems. A remote-controlled weapon station ensures self-defense. The low silhouette, the large stowage space, the broad field of view, and the excellent on- and off-road performance make the EAGLE TASYS the perfect vehicle for today's reconnaissance requirements.
